Precise BioMatch™ Embedded 2.0

Precise BioMatch Embedded offers the integration of biometric functionality into any hardware platform such as mobile devices, point-of-sale terminals, computers and handheld units. With its modular design, Precise BioMatch Embedded 2.0 offers great flexibility in selecting a standardized solution.

Precise BioMatch Embedded has a modular design, giving customers the ability to select functionality depending on the implementation.

This product is based on Precise Biometrics' standardized extractor and matcher technology (ISO 19794-2) which has achieved excellent results in the Ongoing MINEX and MINEX II evaluations. Customer-specific deliveries utilizing other template formats such as ANSI 378 and Precise BioMatch J can be made on demand.

With its modular flexibility, this product is suitable for a wide range of hardware devices such as mobile devices, fingerprint readers, point-of-sale terminals, computers, ATMs, handheld devices, or any other hardware where biometric identification is required.

Precise BioMatch Embedded 2.0 can be used for both Match-on-Device and Match-on-Card implementations. Due to the modular design, deliveries with extractor-only or matcher-only can be made.

Precise BioMatch Embedded 2.0 includes

- Fully implemented image capture, enrollment, and verification controllers
- Modules for standardized functionality such as quality assessment, extraction, matching and anti-latent
- Sample code for non-standardized functionality such as sensor interaction and customer-developed GUI
- Additional or alternative modules delivered upon request
- Integration support

Technical Specifications

The technical specifications will depend on selections made by the customer included functionality and sensor size. The delivery can be adapted to suit the specific platform.
